Overview

A useful tool in the e123 platform is the ability to build communications that you can either view and print, email, or send via text messaging. These communications can be built and customized to reflect your company's or organization's predetermined marketing specs and requirements.

All sorts of communications can be built such as emails for enrollment confirmations, payment related information, plan updates, marketing campaigns, and much more.

Objective

The objective of this guide is to provide you with the instructions necessary to create these communications in the platform.

You will be provided with navigation and building rules so that you can feel comfortable about your abilities and confident that your information will be properly received.

Available Communications

The e123 system has several communication channels available that utilize a Template outline and Dynamic Data to make repetitive communications simple.

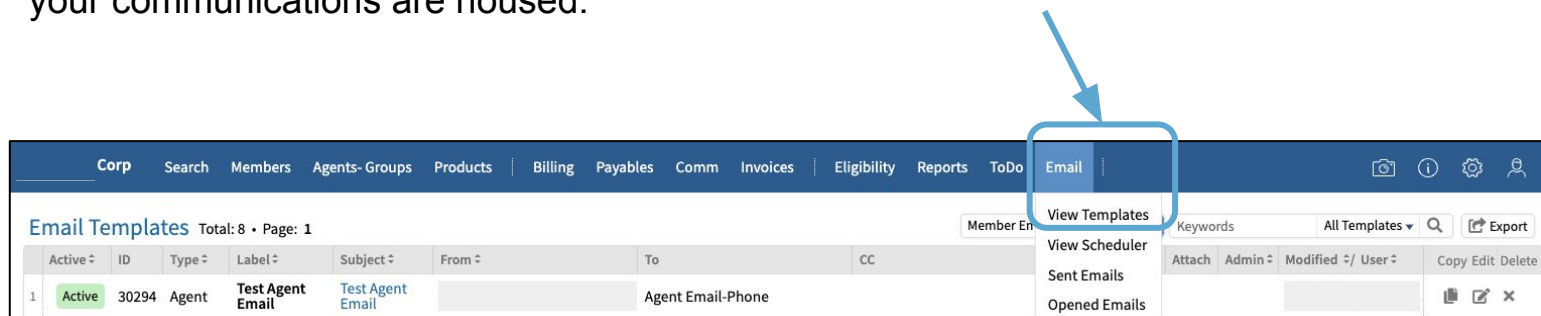

It works like this:

1. Create a Template
 - HTML, Plain Text or SMS Content styles, and then use dynamic codes as place holders where you want to place information that will change based on the recipient.
2. Select the Template
3. Select the Action
 - View, Print, Send, Customize

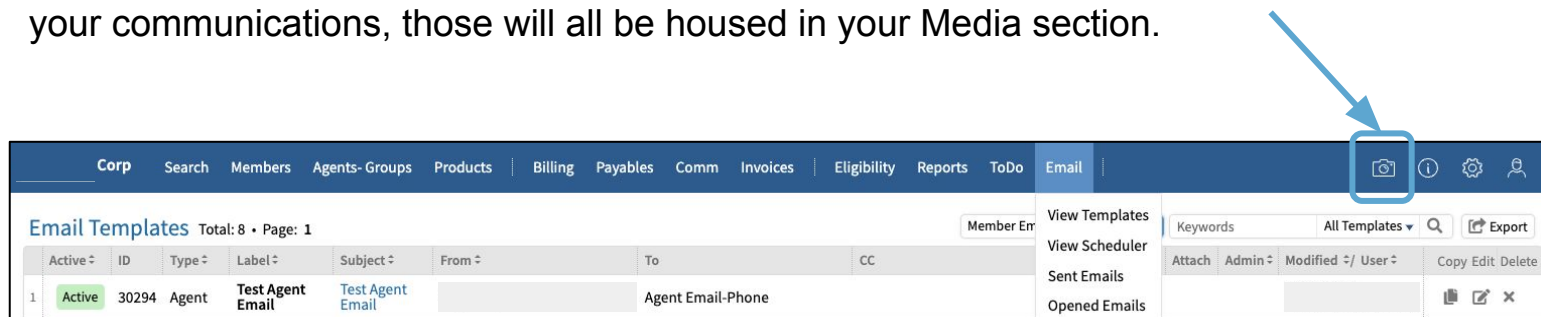

We'll explain how to access and use the templates in more detail after we've gone through the Template creation process.

Where to Access Your Communications

To access the Template List, navigate to the Letters/Email Tab on the top Navigation bar, and select View Templates from the Drop-Down Menu presented. This will be where all of your communications are housed.

If your organization will be using logos, pictures, and documents (such as brochures) in your communications, those will all be housed in your Media section.

You will learn later in this training how to add and link images to your communications.

Version: e123_Documentation_Email/SMS_Setup_v1_20230427

Navigating the Template List

This is the Template List. You can view all the templates housed in your back office. The templates can be set up for Members/Customers or Agents/Marketers/Groups.

Email Templates Total: 8 • Page: 1													
Active	ID	Type	Category	Label	Subject	From	To	CC	BCC	Method	Attach	Admin	Modified / User
Active	30294	Agent		Test Agent Email	Test Agent Email		Agent Email-Phone			HTML			
Active	29044	Member		COPY of Sample Cancellation Email	New Member Welcome - Member ID \$memberid		Member Email-Phone			HTML			
Active	29046	Member		Limited Medical Product	Payment Confirmation / Welcome		Member Email-Phone			HTML	1		

Active Status

Is the template activated for use? If it is inactive, it will not appear in the Letters Lists as an option for sending.

From

The address where the email will originate from, and replies will be sent back to.

Template ID

Used to keep schedulers linked to templates if the Label changes.

To, CC, BCC

Where is the Letter going?

Type

Identifies the information that is accessible through the templates' dynamic data fields - can be Agent or Member Type.

Method

What media channel will the communication be sent on?

Category

A user created label that can be applied to templates for grouping, sorting, or filtering purposes, ie. Welcome, Reminder, Notice.

Attachments

Are files included to be sent with the correspondence? This will display how many.

Label

Internal name of a template used to differentiate from others.

Admin Only

Is the Template for Administrator use only?

Subject

This is what displays as the email subject line when sent externally.

Modified / User

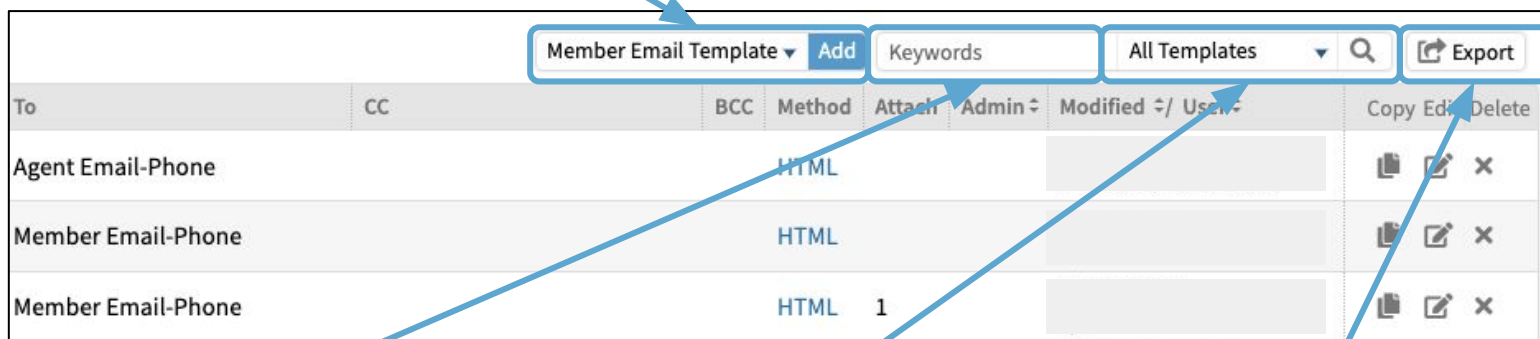

Displays the last date the template was edited and saved and which User made the change.

Version: e123_Documentation_Email/SMS_Setup_v1_20230427

Copyright © 2025 e123 This document is the property of e123. This is proprietary information and not for public distribution. No part of this publication may be reproduced without the written permission of e123.

Create, Delete, Edit, and Search Your Communications

To Make a new template, select a Template in the Selection Box, and click Add.

To	CC	BCC	Method	Attach	Admin	Modified	User	Copy	Edit	Delete
Agent Email-Phone			HTML							
Member Email-Phone			HTML							
Member Email-Phone			HTML	1						

Keyword Search

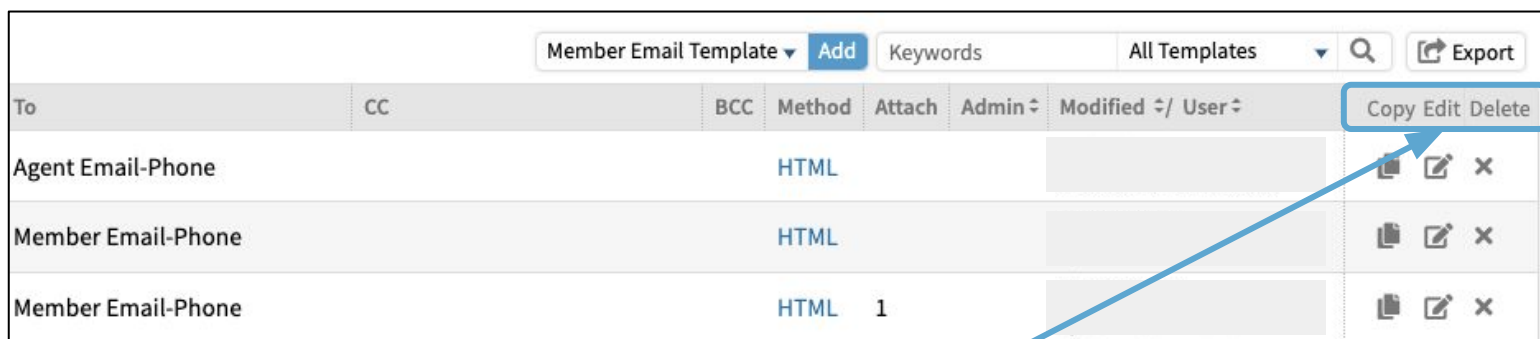

Type in a word from the subject or label of an email to have the template quickly pull up.

Template Filter

If you have created and applied categories for your letter templates, this drop down will allow you to quickly filter templates by category.

Export

Export a list of the communications for things such as version tracking or a compliance list to a carrier.

To	CC	BCC	Method	Attach	Admin	Modified	User	Copy	Edit	Delete
Agent Email-Phone			HTML							
Member Email-Phone			HTML							
Member Email-Phone			HTML	1						

Copy

Duplicates the template, creating a new Template ID, but preserving content and attachments.

Edit

Takes you into the Template to make changes

Delete

Deletes the Template. This will affect schedulers and could affect the history communications.

Version: e123_Documentation_Email/SMS_Setup_v1_20230427

Copyright © 2025 e123 This document is the property of e123. This is proprietary information and not for public distribution. No part of this publication may be reproduced without the written permission of e123.

How to Create a New Template

1. From the Template View List: Select the Template Type from the drop down.
2. Click Add.
3. Enter a Label.
4. Enter a Subject.
5. Enter a From address.
6. Enter a To address, or select To Users.
7. Limit to Products if needed.
8. Add necessary Attachments.
9. Select the corresponding Radial to set the method of sending.
10. Enter the content / correspondence data.
11. Press the Save information button in the bottom left of the page.

The following guide will show you how to do complete each of the above steps so that your organization's communications contain the data and information they require.

Learning the Sections of the Template Page

It is important to understand the different functionalities that are available when building your communications.

As a client, you are able to personalize each of them based upon your organization's requirements.

Understanding how to build your communications' templates will help you successfully print, view, and send notifications directly through your back office.

We'll now be going over the sections, uses, and Types of Content that can be created and how to set them up.

Setting up Your Labeling and Recipients

Determine your organization's naming convention and confirm the sender and recipients to begin setting up your communication.

Label

This is the Admin Label for the template and is only shown in the back office. This is what displays in the Templates List from a Member's Page.

Category

This is where a Custom Category can be applied to the Template.

Agent ID

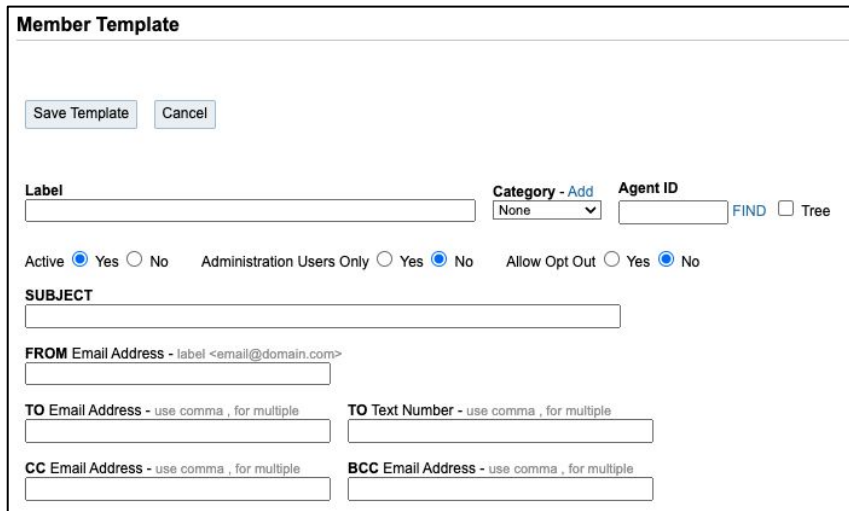

If you need to limit the Template View and Sending capabilities to a single agent or tree, this is where you would configure that setting.

Active Status

This is where you set the use status of the Template.

Administrator Status

Selecting Yes means only users given Administrator permissions can view and use the Template

The screenshot shows the 'Member Template' configuration form. It includes a 'Save Template' button and a 'Cancel' button. The form has several input fields: 'Label', 'Category' (a dropdown menu with 'None' selected), 'Agent ID', 'SUBJECT', 'FROM Email Address' (with a placeholder 'label <email@domain.com>'), 'TO Email Address' (with a note 'use comma , for multiple'), 'TO Text Number' (with a note 'use comma , for multiple'), 'CC Email Address' (with a note 'use comma , for multiple'), and 'BCC Email Address' (with a note 'use comma , for multiple'). There are also radio button options for 'Active' (Yes/No), 'Administration Users Only' (Yes/No), and 'Allow Opt Out' (Yes/No).

Allow Opt Out Status

If the Opt Out on the Member Detail page is set to Yes, then the Member is set to not receive any emails where the email template is set to Allow Opt Out. Only Templates Marked as Opt Out will be stopped.

Subject

Identifies the Topic of the Email for the recipients in their inbox.

From

The Address of the Sender. Replies will be sent to this address.

To

If your email needs to be sent to the same person every time, put the email address here.

CC

If you want to Carbon Copy someone every time the email is sent, put the address here.

BCC

To Blind Carbon Copy an address when the email is sent, place the address here.

Setting up Your Labeling and Recipients - continued

Determine which profiles in the back office you want the communication sent to.

TO Users	CC Users	BCC Users
<input checked="" type="checkbox"/> Member Email-Phone	<input type="checkbox"/> Member Email-Phone	<input type="checkbox"/> Member Email-Phone
<input type="checkbox"/> Member Alternate Email-Phone	<input type="checkbox"/> Member Alternate Email-Phone	<input type="checkbox"/> Member Alternate Email-Phone
<input type="checkbox"/> Agent for Member	<input type="checkbox"/> Agent for Member	<input type="checkbox"/> Agent for Member
<input type="checkbox"/> Agent Parent Email-Phone	<input type="checkbox"/> Agent Parent Email-Phone	<input type="checkbox"/> Agent Parent Email-Phone
<input type="checkbox"/> Agent Top Level	<input type="checkbox"/> Agent Top Level	<input type="checkbox"/> Agent Top Level
<input type="checkbox"/> Agent Billing Contact	<input type="checkbox"/> Agent Billing Contact	<input type="checkbox"/> Agent Billing Contact
<input type="checkbox"/> Agent Assigned to Product	<input type="checkbox"/> Agent Assigned to Product	<input type="checkbox"/> Agent Assigned to Product
<input type="checkbox"/> Agents Assigned to Member	<input type="checkbox"/> Agents Assigned to Member	<input type="checkbox"/> Agents Assigned to Member
<input type="checkbox"/> Agent Alternate Email-Phone	<input type="checkbox"/> Agent Alternate Email-Phone	<input type="checkbox"/> Agent Alternate Email-Phone
<input type="checkbox"/> Dependents Attached to Member	<input type="checkbox"/> Dependents Attached to Member	<input type="checkbox"/> Dependents Attached to Member

To Users

If the recipient of the Email will be dynamic, meaning it changes, use these check boxes to identify the field to be used.

CC Users

To Carbon Copy a dynamic address, use these boxes to identify the field.

BCC Users

To Blind Carbon Copy a dynamic address, use these boxes to identify the field

Filtering Products and Adding Attachments

When building your communication, you will need to decide if you will need to filter the communication based on product, and if it will have attachments. Example: Do you want your communication to only show for specific products in the recipient's Letter drop down on their profile?

Products	View Filters	
Attachments	Add Media Files	Add Dynamic PDFs

Products

By filtering the Products in this section, the email will populate and pull data from that program if the member has two or more on their profile. Note: By default, the system pulls data from the product listed first on the profile.

Attachments:

Add Media Files

To Attach documents to an email, use this section to select the file from the server. Only one Document can be selected for attachment at a time. Total attachment limit is 20MB. (You must double click on the picture or document you want to attach after searching.)

Add Dynamic PDFs

The information added to this section will create a PDF that is attached to the email communication. It can contain logos, pictures, and system populated dynamic fields, such as Member name and ID.

Adding Dynamic Data Codes

e123 offers Dynamic Data Codes. These are prebuilt codes that can be added to communications to personalize them.

Data Dynamic Codes

Dynamic data is information that is periodically updated, meaning it changes over time as new information becomes available. Member Data Codes are how you place variable Member information within your communication templates. Agent Data Codes place Agent Data.

Custom Data

One of the coolest features of using dynamic data is that clients can use their own verbiage and nomenclature throughout their system. As a result, some of the following display fields are blank. The display for these codes are dependent on what your system has entered.

To Insert:

1. Put your cursor in your content where you would like to insert dynamic data.
2. Select the Data type you need to insert from the drop- down list and click Insert.
3. The Data Code is now inserted into your content and you can move and format the code like you would any other text.

More information on Dynamic Codes and a list of available codes for Agents and Members are at the back of this training guide.

Version: e123_Documentation_Email/SMS_Setup_v1_20230427

Content Boxes - Text Version

A content box is an electronic field that holds text and images content for comprising an electronic message. The features available within a content box are different depending on the type of message.

Text Version

Plain text is a loose term for data (e.g. file contents) that represent only characters of readable material but not its graphical representation nor other objects (layout, images, etc.). It may include a limited number of characters that control simple arrangement of text, such as spaces or line breaks.

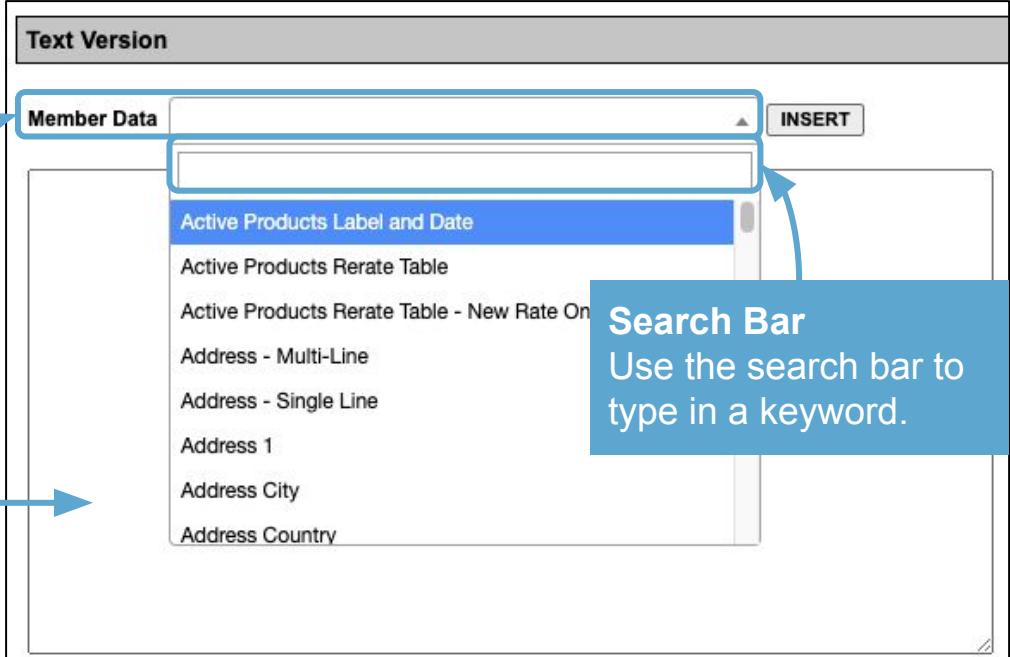

Templates are Plain Text by default. You will need to manually change to another template Type.

Member Data

Use the drop down option to input dynamic data that you want the system to populate/auto-fill.

Text Box

Type the information you want to send in the body of the text box.

The screenshot displays the 'Text Version' content box interface. At the top, there is a header bar labeled 'Text Version'. Below it, a dropdown menu is open, showing a list of options under the 'Member Data' category. The options include 'Active Products Label and Date', 'Active Products Rerate Table', 'Active Products Rerate Table - New Rate On', 'Address - Multi-Line', 'Address - Single Line', 'Address 1', 'Address City', and 'Address Country'. A search bar is located to the right of the dropdown menu, with the text 'Use the search bar to type in a keyword.' displayed below it. An 'INSERT' button is visible to the right of the dropdown menu. Arrows point from the 'Member Data' dropdown and the 'Text Box' section to the interface elements.

Content Boxes - HTML Graphic Version

HTML Graphic Version

HTML stands for HyperText Markup Language, the way web pages and email templates are coded so that text is formatted and images are added. Detailed information on the function of HTML Buttons is at the back of this guide.

Send HTML Version

Selecting Yes will set the HTML version of the template to send.

Tracking

Selecting Yes will track if the message is opened by the recipient.

Member Data

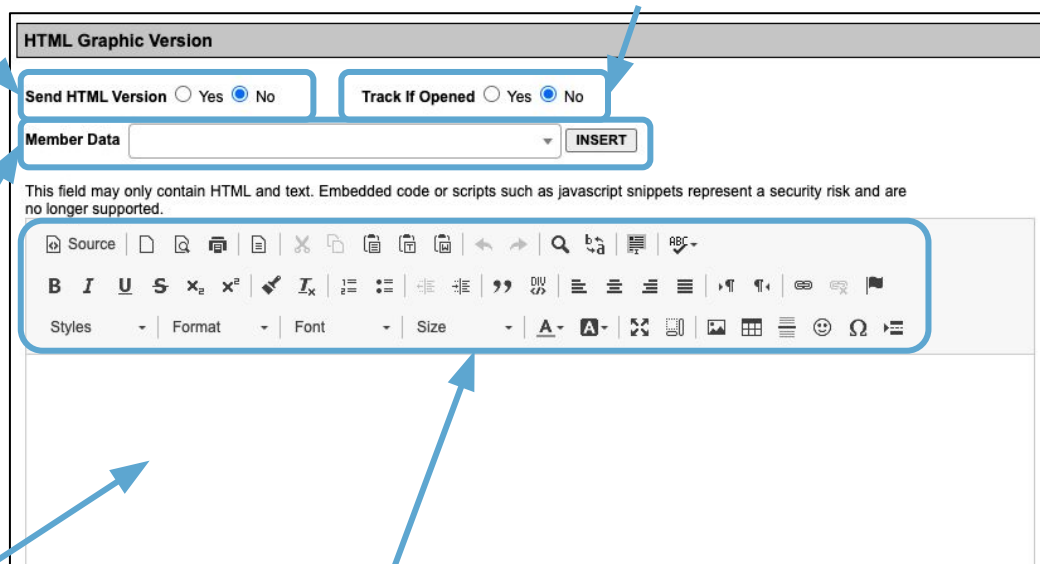

Use the drop down option to input dynamic data that you want the system to populate/auto-fill. Also has the Search Bar.

Text Box

Type the information you want to send in the body of the text box.

Formatting

This is what you will use to format your communication. You can view the layout, copy and paste wording, bold and change font sizes, and add pictures, anchors and links.

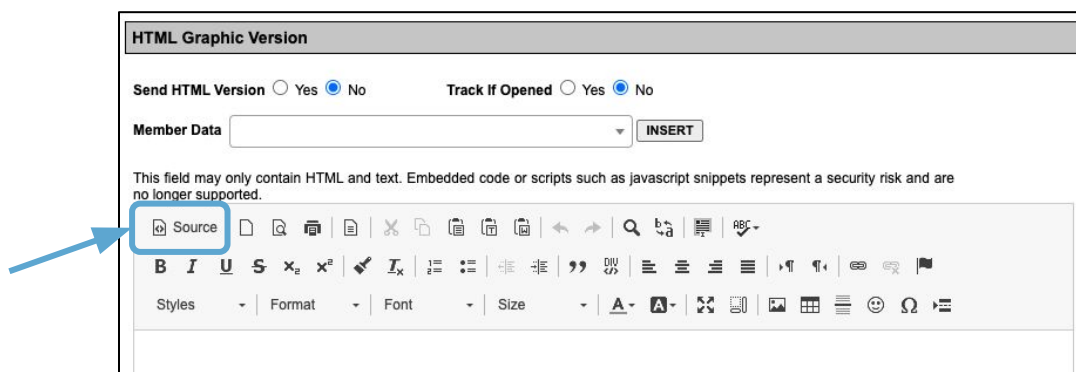

The screenshot shows the 'HTML Graphic Version' editor interface. It includes a header bar with the title 'HTML Graphic Version'. Below the header, there are two radio button groups: 'Send HTML Version' (with 'Yes' and 'No' options, 'No' is selected) and 'Track If Opened' (with 'Yes' and 'No' options, 'No' is selected). Below these is a 'Member Data' dropdown menu with an 'INSERT' button. A warning message states: 'This field may only contain HTML and text. Embedded code or scripts such as javascript snippets represent a security risk and are no longer supported.' Below the warning is a rich text editor toolbar with various icons for text formatting (bold, italic, underline, strikethrough, text color, background color, link, unlink, list, indent, outdent, align, justify, left, center, right, full), font settings (font face, size, color, background color), and other tools (undo, redo, search, replace, link, unlink, list, indent, outdent, align, justify, left, center, right, full). The main text area is empty.

HTML Graphic Version - Using HTML Source Coding

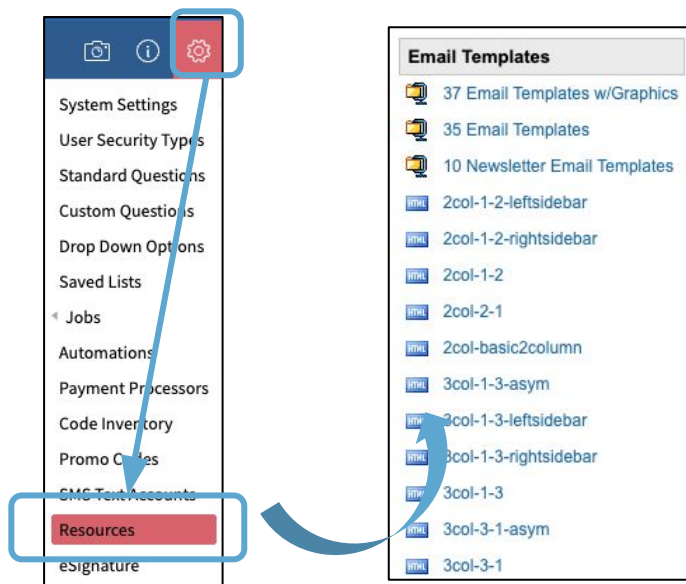

Using Source to Build HTML Templates

If your organization has pre-set HTML/marketing templates, click the Source button to input the code for the communication.

Once it's pasted, relick the Source button to view what the recipient will see.

If your organization does not have predefined templates, navigate to the system Gear > Resources. You will find a column of Email Templates. Click the links to find a template that you would like to use.

You will find multiple layouts ranging from the simple to complex.

These are meant to be customized to include your organization's colors, logos, and pictures.

HTML Graphic Version - Using HTML Source Coding - continued

Selecting an e123 Prebuilt Template

Once you have found a template that you need, right click the page with your mouse and select "View Page Source."

Copying the Code

Copy the entire HTML coding that generated.

```

Version: e123_Documentation_Email/SMS_Setup_v1_20230427

Copyright © 2025 e123 This document is the property of e123. This is proprietary information and not for public distribution. No part of this publication may be reproduced without the written permission of e123.

HTML Graphic Version - Using HTML Source Coding - continued

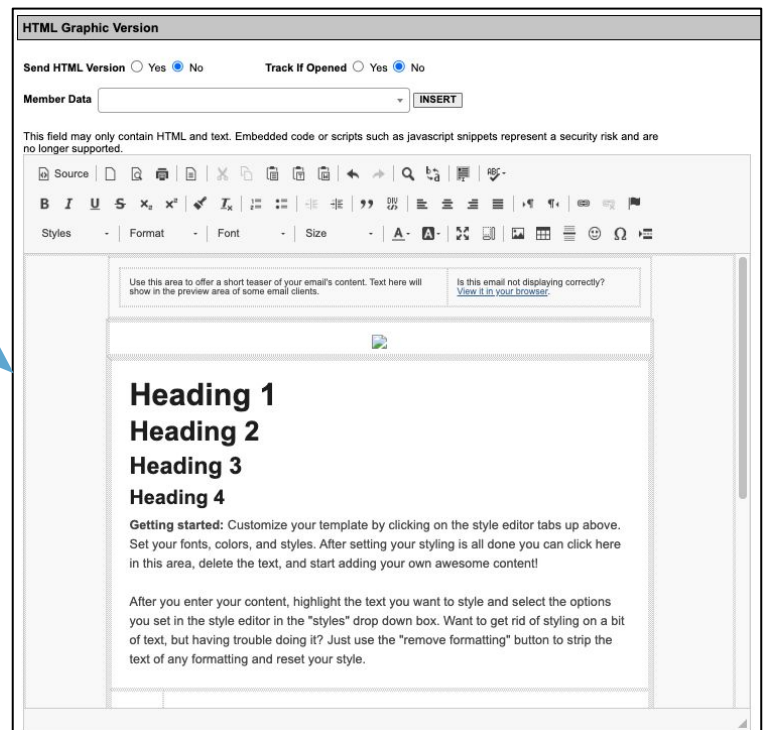

Pasting the Code

Navigate back to your page with the HTML text box. Click on the “Source” button, and paste the code into the text box.

Viewing the Template

Click Source again. Now you can view the communication as the recipient would see it.

The template can be manipulated either via the HTML coding or via the text box, however your team decides to update it.

Version: e123_Documentation_Email/SMS_Setup_v1_20230427

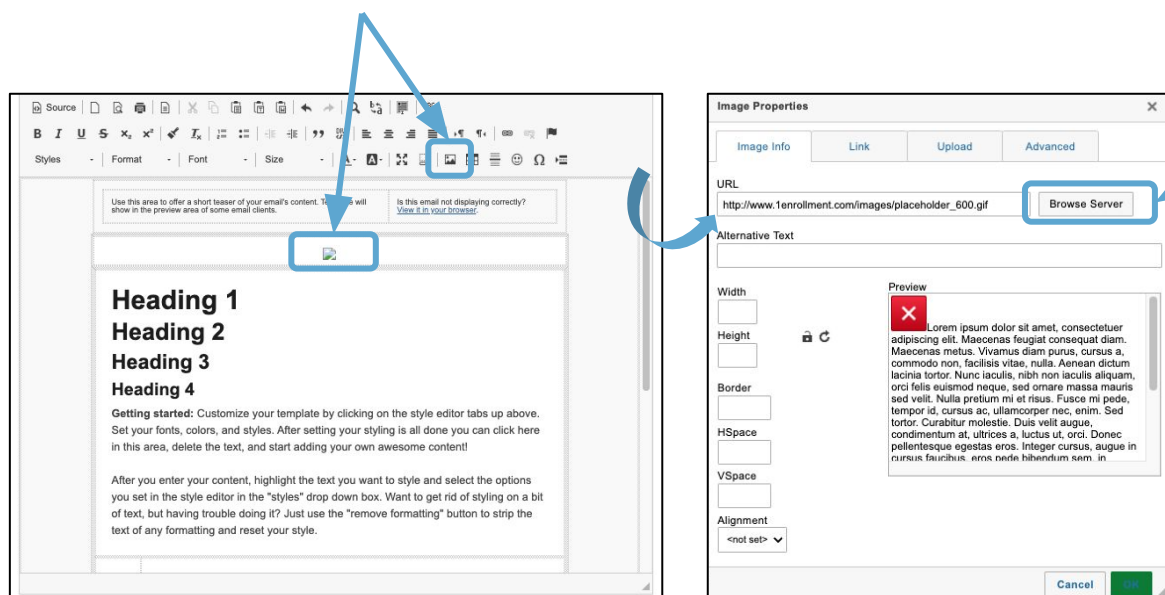

Copyright © 2025 e123 This document is the property of e123. This is proprietary information and not for public distribution. No part of this publication may be reproduced without the written permission of e123.

HTML Graphic Version - Using and Linking an Image

A picture must be linked to the system and your Media file in order for it to display in your communication if you will be sending it via email.

1

Choose where you would like to input the image. In the sample templates, you will see placeholders for ideas on where to input one. Double click the placeholder icon or click the picture in the format bar.

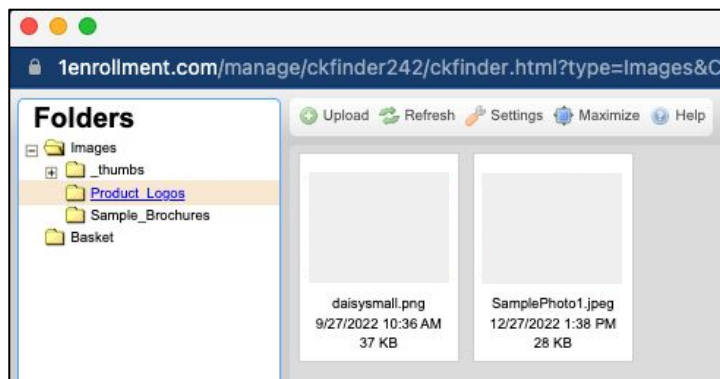

2

Click "Browse Server" to find your picture.

3

Locate your picture in the appropriate folder and double click it. If you are unable to locate it, select "Upload" and upload it from your computer.

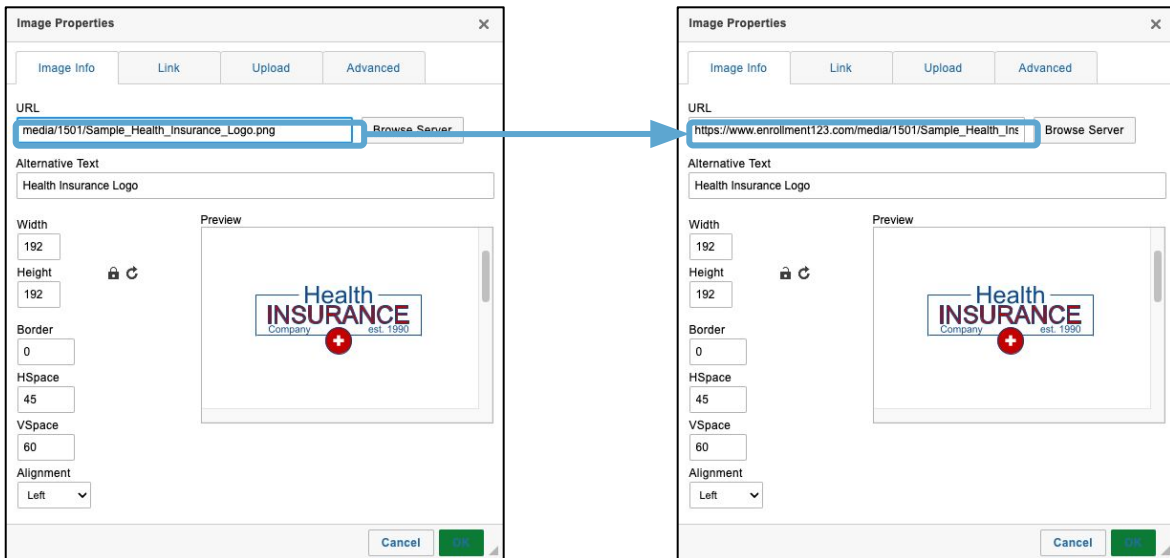

Version: e123_Documentation_Email/SMS_Setup_v1_20230427

Copyright © 2025 e123 This document is the property of e123. This is proprietary information and not for public distribution. No part of this publication may be reproduced without the written permission of e123.

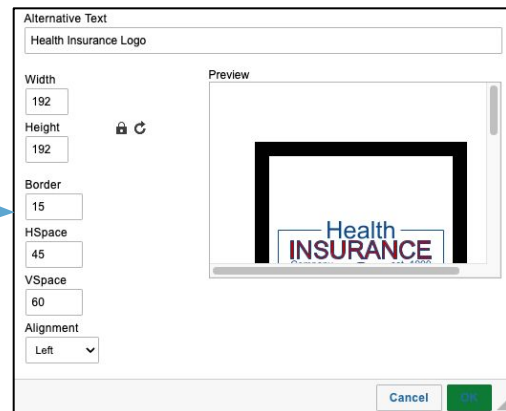

HTML Graphic Version - Linking an Image - continued

If you are not sending your communication via email to a person/people in your back office, you do not need to link your image to the platform. If your communication will be sent via email, you will need to have the full URL attached to your image (*see below*).

4 Input <https://www.enrollment123.com> in front of “/media” in the picture’s URL.

5 Then, work on deciding: if you want text to show should the recipient’s email carrier block images, the size, if you want a border, how far the picture will be from the template border, and alignment.

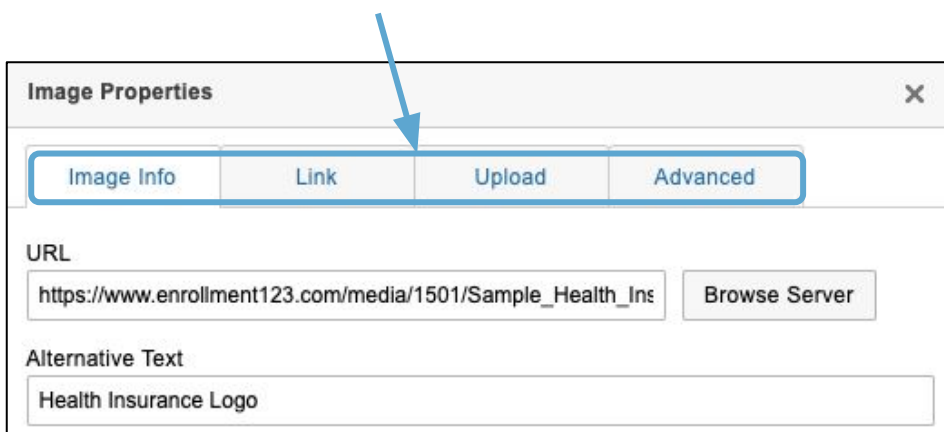

Version: e123_Documentation_Email/SMS_Setup_v1_20230427

Copyright © 2025 e123 This document is the property of e123. This is proprietary information and not for public distribution. No part of this publication may be reproduced without the written permission of e123.

HTML Graphic Version - Linking an Image - continued

Now, your organization can decide whether or not you want your image to have additional functionality, such as linking to an external website.

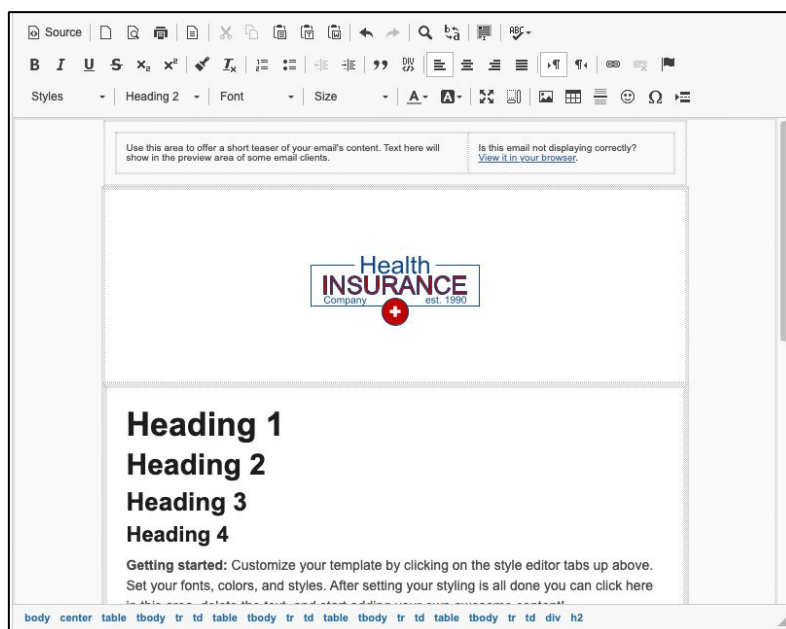

6 Use the additional Image Properties navigation tabs as needed.

7 Click “OK” once you’re complete.

8 Review your template and pictures. Continue to edit your communication as desired.

Version: e123_Documentation_Email/SMS_Setup_v1_20230427

Copyright © 2025 e123 This document is the property of e123. This is proprietary information and not for public distribution. No part of this publication may be reproduced without the written permission of e123.

Content Boxes - SMS Text Message Version

SMS Text Message Version

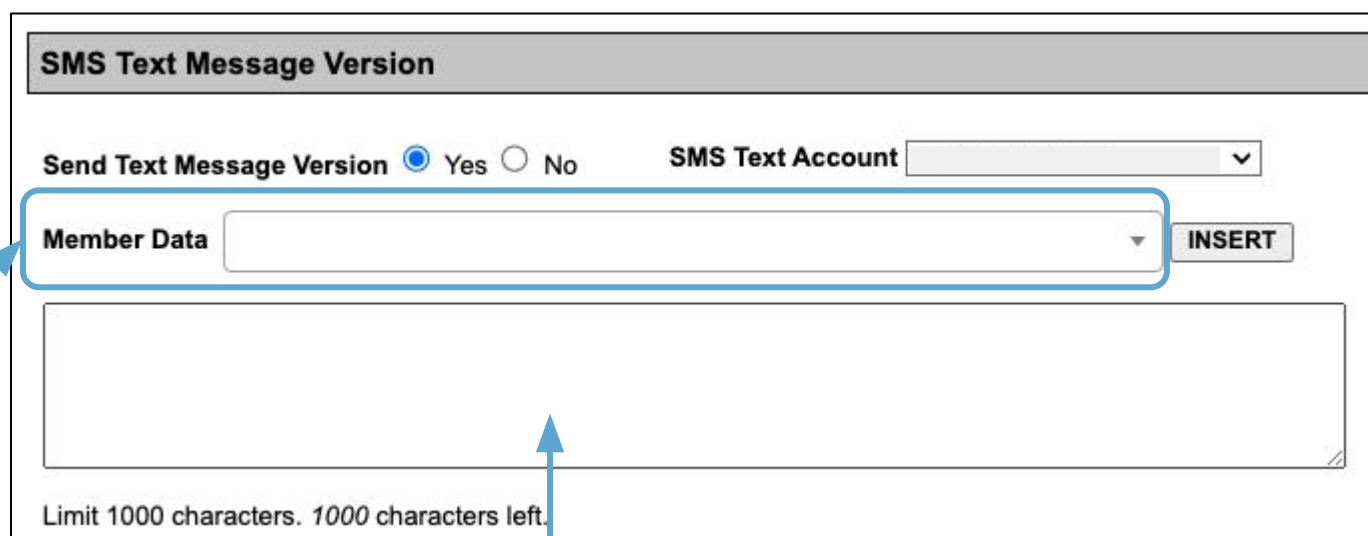

SMS stands for Short Message Service. Standard SMS messages are limited to 160 characters per message.

Send SMS Version

Selecting Yes will make the template an SMS message template.

SMS Text Account

In order to create and send an SMS template, each template needs to have the SMS Account identified and selected here.

Member Data

Use the drop down option to input dynamic data that you want the system to populate/auto-fill. *The search bar is available.*

Text Box

Type the information you want to send in the body of the text box.

Please note: If your organization wants to only send a text, make sure that the HTML "No" radio button is selected. Otherwise, your recipient will receive a blank email at the same time if nothing is in it.

Version: e123_Documentation_Email/SMS_Setup_v1_20230427

Copyright © 2025 e123 This document is the property of e123. This is proprietary information and not for public distribution. No part of this publication may be reproduced without the written permission of e123.

Using the Display Filter for Your Template

These selections are used to show email templates on the Agent and Member pages.

Your organization should decide whether or not you would like to use this filter. Remember, should you build an additional product that you would like to use the template for, you will need to come back to update the communication accordingly.

Display Filter

These selections are used to show email templates on the Agent and Member pages

Content Boxes Recap

Determine the method by which your template will be sent, and enter the data into the corresponding Content Box:

Text Version

- Unformatted
- For users who are not able to view emails with HTML

HTML Version

- Formatted
- For most users who receive emails that support HTML

SMS Text Message Version

- Unformatted, 160 character limit
- For users to receive via phone number

Member Dynamic Data Codes

Custom Data

One of the coolest features of using dynamic data is that clients can use their own verbiage and nomenclature throughout their system. As a result, some of the following display fields are blank. The display for these codes are dependent on what your system has entered.

Though the following list may look like a lot, remember, there is a search function in each of the Data drop down boxes so that you can find what you are looking for easier.

Example: Searching the word “Name”
